Brief intro: the i

Relevance of research (and technology) in the UK

NHS

🕒 This article is more than **1 month** old

NHS deal with AI firm Palantir called into question after officials' concerns revealed

Exclusive: in 2025 briefing to Wes Streeting, officials warned reputation of tech firm behind US ICE operations would hinder rollout of data system in England

Outputs

Over **11,900 research articles** have been published in peer reviewed journals since 2007 until September 2022 and almost 77% of the articles in the Diamond publications database are **open access**. **1 in 10 Diamond** publications has been cited by a patent, with a total patent citation count of **3,455**.

Over **12,500 structures** have been deposited into the Worldwide Protein Data Bank (PDB) since 2007.

Academic and Industrial users as well as suppliers surveyed also reported **several patent applications** as well as **3 start-ups** and a number of new products, services and processes.

Publications per field (2020–2023)

Open access per field (2020–2023)

Open Access routes

Green OA: author publishes in journal and deposits copy of AAM (“accepted author manuscript”) in institutional repository.

Traditionally: delayed OA, with agreed embargo periods

Gold OA: author makes their article OA in a journal, either for a fee (APC) *or via a Read & Publish deal*

“article processing charge” (APC)

UK average APC £2,000 but can vary greatly!

UKRI and a number of biomedical charities provide funds

10:40 – 11:00 Ponencia Invitada: Vía diamante, financiación de hojalata

Introducing Nature Progress

The Researcher's Source

By: Siobhan Bates, Wed Feb 11 2026

What is Nature Progress?

A. Lang: Nature Progress is a new series of fully open access journals in the Nature Portfolio family, covering a wide range of scientific disciplines. Collaborating with research communities in rapidly advancing fields, the new series will guide the progress of these fast growing, vibrant, and dynamic research areas.

D. Sweet: Nature Progress journals are set up to support and serve research communities through the development of close relationships with them. They will do this while espousing the same values and focus on quality that researchers expect from Nature Portfolio. Journals in the Nature Progress series will enjoy the same editorial oversight, rigorous peer review, and high publication and production standards as any Nature Portfolio journals.

cOAlition S

Accelerating the transition to full and immediate Open Access to scientific publications

Plan S: Rights Retention Strategy

Summary

<https://www.coalition-s.org/wp-content/uploads/2020/07/RightsRetentionStrategy.pdf>

cOAlition S has developed a *Rights Retention Strategy* to give researchers supported by a **cOAlition S Organisation** the freedom to submit manuscripts for publication to their journal of choice, including subscription journals, whilst remaining fully compliant with Plan S.

cOAlition S Organisations will facilitate this by changing their grant conditions to require that a Creative Commons Attribution licence (CC BY¹) is applied to all Author Accepted Manuscripts (AAMs²) or Versions of Record (VoR³) reporting original research, supported in whole or in part by their funding.

cOAlition S Organisations' grantees will also be required to ensure Open Access at the time of publication (no embargoes) to all research articles which arise from their funding.

cOAlition S will give notice to publishers about these new grant conditions.

This strategy applies to all manuscripts submitted for publication from researchers funded by a cOAlition S Organisation. However, it is especially relevant when submissions are made to journals whose publisher does

Funders' rights retention

UK Research
and Innovation

Policy scope

Implementation dates

1. The UKRI Open Access Policy applies from the following dates:
 - a. In-scope research articles submitted for publication on or after 1 April 2022.
 - b. In-scope monographs, book chapters and edited collections published on or after 1 January 2024.¹

Compliant open access routes

5. Route 1: Publish the research article open access in a journal or publishing platform that makes the Version of Record immediately open access via its website.
6. Route 2: Publish the research article in a subscription journal and deposit the Accepted Manuscript (or Version of Record, where the publisher permits) in a subject repository at the time of final publication, as defined at Annex 1.
 - a. The deposited version must be free and unrestricted to view and download, and must have a CC BY licence, or other licence permitted by UKRI (see 'licensing requirements').
 - b. A publisher-requested delay or 'embargo period' between publication of the Version of Record and open access of the deposited version is not permitted.

Upon acceptance of publication each staff member with a responsibility for research agrees to grant the University of Edinburgh a non-exclusive, irrevocable, worldwide licence to make manuscripts of their scholarly articles publicly available under the terms of a Creative Commons Attribution (CC BY) licence, or a more ...

Research Publications & Copyright Policy (2021)

THE UNIVERSITY
of EDINBURGH

Purpose of Policy

This will allow University of Edinburgh researchers to make their journal articles and conference proceedings available on an open access basis as required by research funders under Plan S <https://www.coalition-s.org>.

cOAlition S: Could you, please, describe the author copyright policy you have adopted at your university?

Theo Andrew: *The [University of Edinburgh Research Publications & Copyright policy](#) starts off by confirming that members of staff own the copyright to their academic publications in line with current custom and practice. Then, upon acceptance of publication each staff member agrees to grant the University of Edinburgh a non-exclusive and irrevocable licence to make the accepted manuscript version of their scholarly articles publicly available under the terms of a Creative Commons Attribution (CC BY) licence. It is important to note that this assignation of rights happens automatically and no effort is required by the author to fill in forms or add rights retention statements to journal submissions.*

After granting the licence each staff member then agrees to provide an electronic copy of the accepted manuscript in an appropriate electronic format. This article will then be deposited in the Institutional Repository and made open access upon publication. This policy applies to all peer-reviewed research articles, published in either a journal, conference proceeding or publishing platform, authored or co-authored while the person is a staff member of the University of Edinburgh.

cOAlition S: Why did the idea of adopting an institutional copyright/rights retention policy emerge?

“

We started drafting the policy with the intention of clearing up the ambiguity of copyright ownership, and ended up aligning our University policy with the Research Funder vision of immediate open access.

A micro-mechanical insight into the thermo-mechanical behaviour of clays

[\[HTML\] A micro-mechanical insight into the thermo-mechanical behaviour of clays](#)

[A Di Donna](#), [A Casarella](#), [A Tarantino](#) - Geomechanics for Energy and the ..., 2024 - Elsevier

The response of fine-grained soils to the combined effects of stress and temperature is a problem of growing concern in geoenvironmental engineering. Unlike most materials, fine-grained soils subjected to heating under drained conditions can exhibit either reversible expansion or irreversible contraction, depending on their loading history. This clay complex thermo-mechanical behaviour is widely reported in the literature, but its origin is still unknown. This paper explores the particle-scale origin of clay thermo-mechanical behaviour ...

[\[HTML\] sciencedirect.com](#)

[Full Text @ Strathclyde](#)

11. This policy does not apply to monographs, books, book chapters, edited collections or other research outputs although the University strongly encourages authors to make them as openly available as possible.
12. This policy does not apply to preprints. A preprint is a version of an article that precedes formal peer view and publication in an academic journal.
16. The University recognises that there may be cases, and outside of an individual's control, where it is not possible to follow all aspects of this policy. Examples include:
 - An alternative Creative Commons licence may be used on the deposited AAM where a funder allows it, or if there is no external funder mandate or REF requirement. The author must inform the Open Access team of their preference for an alternative licence.
 - If removal of third-party content would make the AAM unsuitable for sharing, an exception will apply and the AAM will be retained as 'closed' access in Pure and Strathprints.
 - If an existing contract with a publisher has been signed that prevents compliance with this policy, an opt-out may be considered. Potential alternatives may be available, including negotiating with publishers on amending copyright licences. Appropriate support will be provided if/where needed by the University's Copyright Officer
 - Institutional authors should bring the need to meet the Institutional Rights Retention Policy requirements to the attention of their co-authors as early as possible in the publishing cycle. If full compliance turns out not to be feasible, there may be an option to apply an opt-out.

In such cases, it will be permissible for authors to voluntarily opt out of the requirement for immediate open access upon publication, or the assignation of a CC BY licence. This, however, may cause the research publication to be non-compliant with funder policies or ineligible for future REF exercises. To opt out, authors must contact the Open Access team at openaccess@strath.ac.uk.

Read & Publish deals and rights retention

Rights Retention Statement position	IEEE will not reject submitted manuscripts or divert such manuscripts to alternative journals due to either a) the inclusion in such manuscripts of author or institutional rights retention statements, or b) the adherence of authors of such manuscripts to institutional or funder rights retention policies. IEEE will not prevent the deposition of Author Accepted Manuscripts (AAMs) to repositories, for release no later than the date of first online publication with a CC-BY licence. Where there is a conflict between the wording above and that presented to authors on IEEE webpages and workflows (including licenses to publish), the statement above shall apply.

De-Castro, P (2025) IRRP implementation in practice: an Open Research Scotland collaboration. *Scottish Journal of Open Research* 1. <https://doi.org/10.36399/6svheh97>

Abstract

The rights retention strategy involves the deposit of embargo-free author accepted manuscripts in institutional repositories under a Creative Commons licence. At a time when five Scottish universities have run their institutional rights retention policies (IRRP) for at least a year (if often for much longer) and five additional institutions are planning to pass their own policies in 2025, this is a good moment for a cross-institutional discussion on the various technical areas that would benefit from some level of consensus. Several key areas were addressed during the Open Research Scotland-held “IRRP implementation in practice” session on 16 January 2025. This paper provides a summary of the discussions, together with some institutional best practices identified during the session and some thoughts on how the application of rights retention could result in more visibility for research publications. This overview of the current state of IRP in Scotland will hopefully further our discussions on the uptake and implementation of this important tool for open research.

Data Centre joining the SPN

A wealth of government datasets, as well as study and survey datasets will be available for secure access from SafePods. This will include datasets from:

- [Office for National Statistics Secure Research Service](#);
- [UK Data Service](#);
- [SAIL Databank](#); and
- Linked datasets created by [Administrative Data Research UK](#) projects.

Other Data Centres are expected to join the SPN to provide access to their datasets over time.

Accessing the SafePod

To access the SafePod at Glasgow Caledonian University follow the instructions below:

- Ensure you are an approved researcher with a project approval in place with a Data Centre that has [joined the SPN](#).
- [Register](#) as a researcher with the SPN. Registration will involve completing a short online questionnaire on SPN User policies.

Espacio Nacional de Datos de Salud: un proyecto estratégico para el país

Fecha publicación

18/04/2024

Construir el Espacio Europeo de Datos de Salud constituye uno de los retos de nuestra generación. La pandemia de COVID 19 nos situó frente al espejo y nos devolvió al menos dos imágenes. La primera no era otra que el resultado de la aplicación de modelos formalistas, burocratizados y avejentados a la hora de gestionar los datos. La segunda, el enorme potencial que ofrece la compartición de datos, la colaboración de equipos interdisciplinarios y el uso de la información sanitaria al servicio del bien común. La Unión Europea apuesta claramente por la segunda estrategia. En este artículo se examinan desde diversos enfoques los **retos que plantea la construcción de un Espacio Nacional de Datos de Salud** como instrumento que **potencie la reutilización** de dichos datos para usos secundarios.

El error de apostar por visiones formalistas

<https://datos.gob.es/es/blog/espacio-nacional-de-datos-de-salud-un-proyecto-estrategico-para-el-pais>
